

Aguatronics™

controlled humidity

Mounted Sanitization Fogging Systems

Aguatronics™ is a mounted, fogging sanitization system, used to protect against surface and airborne viral, bacterial, and mold contamination. The Aguatronics™ technological breakthrough involves a patented micro-fog nozzle, which humidifies the entire room with any disinfectant including peracetic acid, hydrogen peroxide, chlorine dioxide, citric acid, or any other EPA-approved viral biocide.

Compared to hand-held or aerosol sprayers, this fine disinfecting fog efficiently covers the complete indoor environment, including all surfaces and hard-to-reach areas without leaving moisture and residues.

Aguatronics™ technology helps reduce human error and minimize user exposure to sanitizing chemicals and pathogens, while also saving time, money, and labor.

✓ EFFECTIVE

6-10 micron droplet size ensures disinfecting solution coats all surfaces without leaving behind any damaging residue.

✓ VERSATILE

Easy maneuverability allows it to work in any environment where effective sanitation is required, including public spaces, dining areas, kitchens, restrooms and common areas

✓ EFFICIENT

Gets in all the nooks and crannies without excess waste and disinfects most spaces inside of 20 minutes and can be set to automatically dispense.

ECONOMICAL

Fraction of the cost compared to manual hand held sanitation processes. Proactive approach for preventing liability for cross contamination.

One system for the Hotels, Restaurants, Theaters, Office Environments
and other Public Spaces.

EFFECTIVE - nozzles are capable dispensing sanitizers without wetting floors and can be set to release and sanitize after hours

SAFE- no standing water or air tank required, so no risk of bacterial colonization

EFFICIENT - 100% water efficiency, no drain required, and low air (20psi) and water (40psi) operating pressures

FAST- patented nozzle design evenly distributes fine fog (6-10 microns); this fog dissipates very quickly and effectively increasing the RH

SIMPLE - easy installation and maintenance

RELIABLE- high quality components for continuous operation

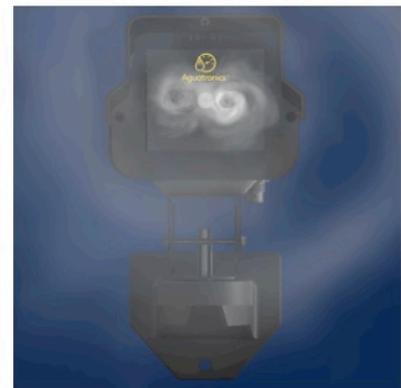

CUSTOMIZABLE - configured to the design of your site

ENERGY EFFICIENT - low energy consumption - does not require the use of high powered fans to atomize

LOW MAINTENANCE - requires a fraction of the maintenance when compared to the competitors
